

# Juan Francisco Furfuri

## WORDPRESS DEVELOPER

Mendoza, Argentina (GMT-3) | English C1, EF SET verified | [juanfranfurfuri@gmail.com](mailto:juanfranfurfuri@gmail.com)

[github.com/juanfranciscofurfuri](https://github.com/juanfranciscofurfuri) | [linkedin.com/in/juan-francisco-furfuri-altamira-2b8a74336](https://linkedin.com/in/juan-francisco-furfuri-altamira-2b8a74336) | [matix.digital](https://matix.digital)

---

WordPress developer with 2+ years building and maintaining client sites in Elementor and Elementor Pro. I run my own agency, so client-facing work is the default: I scope the requirement, build it, and answer for it afterwards.

## EXPERIENCE

### Founder & WordPress Developer — Matix Digital

2025 – Present

[matix.digital](https://matix.digital) | Independent web agency, Argentina

- Run the agency end to end: scope the requirement, build the site, deliver it, and own the client relationship
- Delivered sites for around 10 clients, built in WordPress with Elementor Pro and Divi
- Build around the outcome the client needs rather than around a template. For a coworking space that meant designing the site as a sales funnel with integrated lead capture forms ([espaciogropius.com.ar](https://espaciogropius.com.ar))
- Day to day: WordPress, Elementor Pro theme builder and templates, PHP, HTML, CSS, JavaScript

### WordPress Developer & Sales — Spika Solutions

2023 – 2024

- Optimized a client site for performance, then traced and resolved the buffer errors that surfaced afterwards to WordPress configuration rather than to the optimization itself
- Took over existing client sites, diagnosed what was broken, and fixed it
- Built and delivered a landing page for a UK law firm, scoped and handled in English
- Worked client-facing throughout, combining delivery with sales

### Software Support — D'Todo Agua

2020 – 2022

- Frontline technical support for Java and Python applications, diagnosing customer-reported issues

## PROJECTS

### d2 Attention Test Calculator

[live demo](#)

[juanfranciscofurfuri.github.io/CalculadoraTestPsico](https://juanfranciscofurfuri.github.io/CalculadoraTestPsico)

- Web tool that scores a standardized psychology test and compares results against age-banded reference values. Built for a thesis where the scoring was done by hand
- Found and fixed two calculation bugs in the original version: misaligned function arguments, and numeric values compared as strings

### TiendaJDBC

[github.com/juanfranciscofurfuri](https://github.com/juanfranciscofurfuri)

- Java sales system with MySQL persistence through JDBC, structured in three layers
- Rewrote the write operations to use PreparedStatement, closing an SQL injection hole, and moved database credentials out of the source into environment variables

## SKILLS

**WordPress:** Elementor, Elementor Pro, theme builder, templates, Divi, plugin configuration, forms and third-party integrations, performance optimization, troubleshooting

**Web:** HTML5, CSS, JavaScript, PHP

**Tools:** Git, AI coding agents (Claude Code)
